

Satellite Radio should be allowed to cover weather and traffic. It makes no sense to make me switch channels to try to find one which covers (or does not cover) the area where I am. I travel frequently, and local radio tuning is both dangerous and the coverage is spotty. I respectfully ask that you reject the NAB's petition 04-160, limiting satellite radio's ability to compete in this area, and help make us safe. I pay for the service, and like satellite TV, they should be allowed to cover local situations.

Thanks for your consideration!
